

Cold Email — Long-Term Operating Model

Phase 1 (Claude + Dashboard) → End state (run it from the Dashboard)

Q: Long-term, can we build, run & test campaigns fully in the dashboard?

Yes — no architectural blocker. The dashboard already has the backend it needs. About **80% of the routine loop becomes one-click**. A thin slice (the go-live flip, brand-new copy, strategy, and novel debugging) stays Claude-assisted **on purpose** — that is safety and judgment, not a missing feature.

CAMPAIGN TASK	PHASE 1 — TODAY (CLAUDE + DASHBOARD)	END STATE — DASHBOARD-ONLY	DASHBOARD-ONLY?
Pull qualified leads	Claude runs a pull command	One-click "Pull leads" button	✓ Full button
Qualify a new batch (paid AI)	Claude runs the batch	Button + spend cap & confirm	⚙ Gated
Verify emails (MillionVerifier)	Claude runs verify	Automatic on pull, or a button	✓ Full button
Build / segment the audience	Already in the dashboard (Audience Builder)	Same — already done	✓ Today
Preview the campaign copy	Copy preview pack (live now)	Same — already done	✓ Today
Generate / rewrite copy	Claude writes + self-critiques	"Regenerate" button — calls Claude behind it	🧠 Claude-powered
Set up the A/B test	Claude sets the challenger offer	Pick the challenger in the UI	✓ Full button
Pre-send safety gate	Runs in the engine; dashboard shows it	Same — already shown	✓ Today
Launch / go live	Theodore flips the engine switch	Gated "Go live" button (strong auth + confirm)	⚙ Gated by design
Send + monitor deliverability	Engine paces; monitor + dashboard watch	Same — already watched	✓ Today
Read the analytics	Dashboard	Same — already done	✓ Today
Maintenance call (hold / scale / pause)	Dashboard shows data; you decide	Same, with guardrail prompts	✓ Full button
Strategy · ICP · brand-new segments	Claude + you + Eric / Malcolm	Human judgment — not a button	🧠 Stays human
Debug anomalies / new edge cases	Claude	Claude on call (escalation)	🧠 Stays Claude

✓ Full button becomes a normal dashboard click

⚙ Gated a button, but deliberately fenced (cost or safety)

🧠 Claude-powered stays Claude / human by design, not a limitation

THE PLAN

Month 1: refine the whole system with Claude in the loop. → **Then:** harden every proven step into a dashboard button. → **End state:** Malcolm runs the daily loop from the dashboard; Claude stays the strategist + safety net, not the daily operator.
