

Go-Live Checklist · First Cold Email Campaign

Franchise Sellers

Company Sellers

Everything that must be true before we flip the switch. Target: **EOD Thursday, July 2.**

Owners: **MALCOLM** **THEODORE** **CLAUDE** **VERIFY** ☐ to do ☒ already done

✓ ALREADY IN PLACE (THE FOUNDATION)

- ✓ Engine built and dry-run gated. Nothing sends until the master switch is flipped.

✓ 1,429 leads qualified and in the database (815 CS, 614 FS).

✓ 86 warmed cold mailboxes ready (~2,580/day ceiling).

✓ Cold-domain allow-list enforced. Never the two main brand domains or staff inboxes.

✓ Open and link tracking OFF (2026 deliverability posture).
- ✓ CAN-SPAM footer (mailing address + opt-out) auto-added to every email.

✓ MillionVerifier wired for fresh pre-send verification.

✓ Deliverability monitor running daily (SPF/DKIM/DMARC, blacklist, warmup).

✓ Pre-send safety gate coded (hard-blocks a bad send).

✓ Dashboard, simulator, and copy playbook delivered to Malcolm.

❑ STILL TO DO BEFORE GO-LIVE

- ☐ **Pick the first segment.** One brand, one segment (a named franchise system for FS, or a top industry for CS).

☐ **Confirm the segment's targeting is right.** This clears the gate's "ICP confirmed." Eric's full ICP only sharpens later, it does not block this.

☐ **Write the 3-email sequence fresh.** Built from the Broker Playbook, not by polishing old drafts.

☐ **Copy passes the rules.** No em dashes, one soft CTA, credibility not claims, confidentiality named, free valuation framed as an opinion not an appraisal, honest subject, soft seller breakup.

☐ **Approve the copy.** This clears the gate's "copy approved."

☐ **Pull the qualified leads** for the chosen segment.

☐ **Fresh-verify the send list** through MillionVerifier. Confirm projected bounce is well under 3%.

☐ **Trim to the first small batch** (~200 to 300 contacts).

☐ **Sending domains green** on the mailboxes this campaign uses. SPF/DKIM/DMARC pass, warmup healthy, none blacklisted.

☐ **Reconnect any errored mailbox** before it is included.

☐ **Cross-brand suppression confirmed.** An opt-out from one brand also suppresses the other (one shared list).

☐ **Build the campaign in Instantly (dry-run).** Load approved copy + verified leads, attach approved lookalike mailboxes only, set 30/mailbox/day with jitter.

☐ **Run the pre-send gate.** Every must-pass item green.

☐ **Agree who watches replies** for the first batch. Positives go to Lelia to schedule, unsubscribes go to suppression.

☐ **Final review of the staged campaign.** The exact emails, the list, the mailboxes.

☐ **Flip CEO_DRY_RUN to false** on the small batch, one brand only.

☐ **Watch for 48 hours.** Bounce under 3%, unsub under 2%, replies sane. If clean, ramp next week.

The pre-send gate is the backstop. It will not let a campaign send unless tracking is off, SPF/DKIM/DMARC pass, no domain is blacklisted, warmup is healthy, last bounce is under 3%, the footer has an address + opt-out, and the two human sign-offs (copy approved + ICP confirmed) are checked. The list above is how we get every one of those to green.

The blockers that are genuinely ours this week: Malcolm's fresh copy, the segment pick + targeting confirm, and the lead verify. Everything else is built or a quick check. · Franchise Sellers / Company Sellers · 2026-06-28
