

Permanent Listing URLs

Proposal for approval

August 06, 2026 • Prepared by Malcolm, Marketing • Franchise Sellers / Company Sellers

We can make each listing's web address permanent so the links we share never break. Deal Studio has confirmed the fix and quoted roughly **\$500** to build it. We recommend approving it and applying it to new listings going forward, with **no change to existing listings and no added labor**.

The problem

Our listing web addresses are built from the listing's title. When we revamp a listing (new title) or when BizBuySell reassigns the listing ID and we adopt it to stay consistent, the address changes, and any link we have already shared stops working: paid ads, emails, social posts, referral links, and buyer bookmarks all lead to a dead page. The buyer lands on a broken link, we lose the click, and it looks unprofessional. This happens on revamps and re-lists, which are a normal part of the listing lifecycle.

This has already happened

We recently ran paid ads pointing to a listing whose address had changed. Every click landed on our home page instead of the listing it was advertising, because the old address no longer existed and redirected home. We caught it within a day or two, but until then we were paying for clicks that never reached the listing we were promoting. A permanent URL prevents this.

The solution

Deal Studio will add an optional Custom Slug field. We assign one permanent, unique code per listing (for example FS-48213), and it becomes the listing's web address for the life of the listing, regardless of any later title or ID change. Left blank, a listing behaves exactly as it does today, so no existing listing is affected. Our tool generates the codes and checks each one for uniqueness, so there is no risk of duplicates or manual error.

Why it is worth it

Every ad dollar, email, social post, and referral link keeps working through revamps and re-lists, and buyers never hit a dead page. The alternative is catching and fixing broken links by hand, which only works where we can still edit the link (an active ad, not an already-published social post) and relies on someone noticing every time. A permanent URL removes that risk and the busy work, so the team can focus on what moves listings.

The cost

- One-time Deal Studio development: **approximately \$500**.
- No redirection plugin or extra software, because we are not changing any existing URLs.
- No added labor for the support team, because existing listings stay exactly as they are.

The plan

- Keep operating exactly as we do today until the field is built. Nothing changes.
- Once built, every new listing gets a permanent code during normal onboarding.
- Existing listings stay unchanged and keep working as they do today (we can extend to older listings later if we choose; it is not required for this approval).

The ask

Approval to proceed with the approximately \$500 Deal Studio development. Once approved, Deal Studio schedules the build and we begin applying permanent URLs to new listings as soon as it is live.
